ⓘ Your role does not permit access to this information. ✕

If **NONE** of the fields can be viewed or edited:

\- Show an inline information message, instead of "empty" fields.
Note: The message styling and wording are TBD, this is just a rough-draft example.

✎ Edit

Username: AUsername

The current user/role has limited access. To view more options, log back in using a role with greater permissions.

Alternative A) If SOME fields are viewable/editable and some are not, but there is nothing that the user will gain/learn by viewing the empty fields:

- Consider not showing the "null" options.
- Additionally, it might be useful to show some type of Inline Info Message to help them to understand that more options might be available if they were logged in with as a different user/role.

Note: The message styling and wording are TBD, this is just a rough-draft example.

Security Domain 🔒   *The permissions for your role do not allow access to this data.*

Alternative B) If some fields are viewable/editable and some are not & the user can gain context or helpful information through the read-only data:

- Consider using some type of Inline Info Message to explain why there is no data shown. If possible, provide a link to an action that might resolve the issue ("Log out"?).
- Graying-out the "locked" elements labels might also help to distinguish these field as unavailable.

Note: The message styling and wording are TBD, this is just a rough-draft example.
